

July 8<sup>th</sup> 2010 – Lugano, Switzerland

The AlpEnergy 2010 summer school aims at bringing together experts and practitioners from different fields correlated in VPS concepts. The main goal of the School is to identify the main issues coming from challenges posed by VPS implementation and to offer possible answers.

So far three areas have been identified as critical for successful implementation of the VPS – commercial framework, technical operation of the system and internal communication solutions. Aligned with this, the three appropriate experts have been invited as presenters: Prof. Larsen (an expert in energy markets), Prof. Kulic (as an expert in control aspects of power systems) and Prof. Capone (as an expert in Smart Grid communication issues).

### **AGENDA**

h. 9.00

AlpEnergy project presentation - VPS open issues (by the leader partner)

h. 9.15

Technical issues of VPS implementation by Prof. Kulic

h. 9.45

Open discussion with the expert

h. 10.45

Coffee break

h. 11.00

Communicational issues of VPS implementation Prof. Capone

h. 11.30

Open discussion with the expert

h. 12.30

Lunch

h. 14.00
