

International Conference within the Framework of the Project CO2NeuTrAlp

29 September 2009 - University of Applied Sciences, Kempten

The international CO2NeuTrAlp Kick-Off Conference offers a central platform for the discussion of the first project results and the potential of renewable energies for alternative propulsion technologies. Both technological and organisational concepts for sustainable mobility – foremost but not only - in the Alpine Space will be presented and debated. A vehicle fleet with electric or biogenous powered passenger cars, trucks, buses, pedelecs and tractors will be made available for demonstration purposes.

Apart from the project partners from France, Italy, Slovenia, Austria and Germany, about 200 international guests are expected, including decision-makers from local authorities, regions and companies, mobility experts, scientists as well as a broad range of public experts.
