

AlpEnergy will eventually publish a "**VPS white book**" as a common base for discussion with stake-holders and partners. A set of criteria will also be distributed to assess VPS potentials in each region, together with a study about the feasibility of VPS models and their effects on sustainability and spatial development.

End results:

-

guidelines for practitioners

(power suppliers and regional development agencies)

-

national procedures for political decision makers

-

research reports

(both technical and business topics)

-

market reports for SMEs

(business opportunities for VPS and related technologies)
